

Caner Derici, PhD

dericilab.live @ caner@dericilab.live [in](#) canerderici [G](#) cderici [P](#) extended (CV) [📍](#) UT, USA

Technical Skills

Areas of Expertise: Compilers & Programming Languages · Distributed Systems · Machine Learning
Languages: Go · C/C++ · Python · Racket/Scheme · LLVM · Java · SQL · JavaScript
Cloud: Kubernetes · AWS · GCE · Terraform · LXD · Docker
Productivity & Workflows: Obsidian · Toggl · Todoist · Linux · Neovim · VSCode · Copilot · ChatGPT · Git · GH Actions
API, DB & Misc: REST · gRPC · OpenAPI · FastAPI · DQLite · MongoDB · PostgreSQL · CI/CD · Jenkins

Education

Ph.D., [Indiana University, Bloomington](#), Computer Science, Compilers & Programming Languages 2015 – 2025
Dissertation: [Self-Hosting Functional Programming Languages on Meta-Tracing JIT Compilers](#)
M.Sc., [Boğaziçi University](#), Computer Science, Machine Learning & Natural Language Processing 2012 – 2015
B.Sc., [Bilgi University](#), Computer Science 2005 – 2010

Experience

Canonical USA REMOTE, US
Software Engineer II (L4), distributed orchestration at scale, juju team 2021 – 2024

- Developed and maintained Juju (see Projects below) as part of a 10-engineer team.
- Improved reliability and fault tolerance by implementing edge machine services on relational DQLite back-end, migrating from NoSQL MongoDB (e.g., [sample PR](#)).
- Owned client libraries for three years—[python-libjuju](#), [Terraform Juju Provider](#); doubled active users and maintained a steady release cadence.
- Took part in roadmap planning, coordinated cross-team efforts; mentored junior engineers, and improved hiring by creating a structured Juju-Bootcamp process that cut ramp-up from 6 months to 1 month for new engineers.

Indiana University IN, US
Research Assistant, Course Instructor 2015 – 2021

- Independently took an ambiguous, uncharted compiler problem from zero to working product; built the first-ever tracing JIT compiler that is a full-scale runtime for a self-hosting, production-grade language. Conducted a full performance investigation and designed new optimization algorithms (see [Pycket](#) below).
- Taught data structures & algorithms, compilers, virtual machines, and domain specific languages.

Asseco SEE Group
Software Engineer 2010-2012

- International software company developing virtual payment platforms for e-commerce platforms. I developed and delivered 3 virtual point-of-sale projects in 2 years. Used Java, Apache Tomcat, Spring, Mercurial, Jira.

Selected Projects

[Juju: A large scale, eventually consistent distributed orchestration system](#)

Used by ~200 companies globally for managing cloud workloads on any infrastructure (Kubernetes or otherwise) across various cloud providers (e.g., AWS, GCE), capable of handling 1000+-node workloads with 99.9% availability. See Canonical above for my contributions. In Go, and Python.

[Pycket: A tracing JIT compiler for full-scale Racket](#)

Developed and maintained [for over five years](#). Designed the compiler to self-host a language on a meta-tracing JIT backend. Contributed designing a new IR (see publications). Built [performance analysis tools](#), run-time optimizations, and [formalisms](#) to improve performance. Implemented code-gen for full FFI layer, and engines with meta-continuations for preemption for green threads. In Python, C, and Racket.

[Rax: A full-stack nanopass compiler from Racket to x86_64](#)

Implemented all the passes (e.g., closure conversion, register allocation, code-gen, etc.), along with garbage collection. Developed optimizations, such as inlining, loop-invariant code motion, and proper tail-calls. In Racket, and C.

[FARS: Functional Automated Reasoning System](#)

A resolution/refutation theorem prover, for expressions in first-order predicate logic with equality. Used binary paramodulation, and forward and backward subsumption for equational deduction. In Racket.

[HazırCevap \(Witty\): A closed domain question answering system for high school students](#)

Government funded large scale question answering system. M.Sc. thesis on NLP. Led the R&D team (3 faculties, 4 grad students). Developed a Hidden Markov Random Field model for question analysis, and relevance metrics for information retrieval and response generation (see publications). In Python, and JavaScript.

Last compiled on October 3, 2025

Awards & Scholarships

- Scholarship and award for a project on teaching natural languages to hearing impaired, 2014.
 - Full Scholarship for PhD, 2015-2020
 - Full Scholarship for MSc, 2012
 - Full Scholarship for BSc, 2005-2010
-
