## Technical Skills

|                                      |  |
|--------------------------------------|--|
| <b>Areas of Expertise:</b>           | Compilers & Programming Languages · Distributed Systems · Machine Learning               |
| <b>Languages:</b>                    | C++ · Go · Python · Racket/Scheme · LLVM · Java · SQL · JavaScript                       |
| <b>Cloud:</b>                        | Kubernetes · AWS · GCE · Terraform · LXD · Docker  |
| <b>Workflows &amp; Productivity:</b> | Linux · Neovim · tmux · VSCode · Copilot · Git · GH Actions · Obsidian · Toggl · Todoist |
| <b>API, DB &amp; Misc:</b>           | REST · gRPC · OpenAPI · FastAPI · DQLite · MongoDB · PostgreSQL · CI/CD · Jenkins        |

## Education

|   |             |
|---|-------------|
| Ph.D., <a href="#">Indiana University, Bloomington</a> , Computer Science, Compilers & Programming Languages  | 2015 – 2025 |
| Dissertation: Self-Hosting Functional Programming Languages on Meta-Tracing JIT Compilers                     |             |
| M.Sc., <a href="#">Boğaziçi University</a> , Computer Science, Machine Learning & Natural Language Processing | 2012 – 2014 |
| B.Sc., <a href="#">Bilgi University</a> , Computer Science  | 2005 – 2010 |

## Experience

|  |             |
|--|-------------|
| Canonical USA  | REMOTE, US  |
| <b>SWE II (L4 - IC3) · Distributed orchestration at scale</b>  | 2021 – 2024 |
| <ul style="list-style-type: none"><li>Developed and maintained <a href="#">Juju</a>, an eventually consistent distributed orchestration system used by ~200 companies globally, capable of handling 1000+-node workloads with 99.9% availability on any infrastructure (Kubernetes or otherwise) across various cloud providers (e.g., AWS, GCE). All in Go.</li><li>Improved reliability and fault tolerance by implementing edge machine services on relational DQLite back-end, migrating from NoSQL MongoDB (e.g., <a href="#">sample PR</a>).</li><li>Owned client libraries for three years—<a href="#">python-libjuju</a>, <a href="#">Terraform Juju Provider</a>; doubled active users and maintained a steady release cadence.</li><li>Took part in roadmap planning, coordinated cross-team work; mentored junior engineers, and improved hiring by creating a structured bootcamp process that cut down onboarding new engineers from 6 months to 1 month.</li></ul> |             |
| Indiana University   | IN, US      |
| <b>Research Assistant, Course Instructor</b>   | 2015 – 2021 |
| <ul style="list-style-type: none"><li>Independently took an ambiguous, uncharted compiler problem to a working product; built the first-ever tracing JIT compiler that is a full-scale runtime for a self-hosting, production-grade language. Conducted a full performance investigation and designed new optimization algorithms (see <a href="#">PhD dissertation</a>).</li><li>Taught data structures &amp; algorithms, compilers, virtual machines, and domain specific languages.</li></ul>   |             |
| Asseco SEE Group   |             |
| <b>Software Engineer</b>   | 2010-2012   |
| <ul style="list-style-type: none"><li>International software company developing virtual payment systems for e-commerce platforms. I developed and delivered 3 virtual point-of-sale projects in 2 years. Used Java, Apache Tomcat, Spring, Mercurial, Jira.</li></ul>  |             |

## Selected Projects

### [Pycket: A tracing JIT compiler for full-scale Racket](#)

Developed and maintained [for over five years](#). Designed the compiler to self-host a language on a meta-tracing JIT backend. Contributed designing a new IR (see publications). Built [performance analysis tools](#), run-time optimizations, and [formalisms](#) to improve performance. Implemented code-gen for full FFI layer, and engines with meta-continuations for preemption for green threads. In Python, C, and Racket.

### [Rax: A full-stack nanopass compiler from Racket to x86\\_64](#)

Implemented all the passes (e.g., closure conversion, register allocation, code-gen, etc.), along with garbage collection. Developed optimizations, such as inlining, loop-invariant code motion, and proper tail-calls. In Racket, and C.

### [FARS: Functional Automated Reasoning System](#)

A resolution/refutation theorem prover, for expressions in first-order predicate logic with equality. Used binary paramodulation, and forward and backward subsumption for equational deduction. In Racket.

### [HazirCevap \(Witty\): A closed domain question answering system for high school students](#)

Government funded large scale question answering system. M.Sc. thesis on NLP. Led the R&D team (3 faculties, 4 grad students). Developed a Hidden Markov Random Field model for question analysis, and relevance metrics for information retrieval and response generation (see publications). In Python, and JavaScript.

---

## **Selected Publications**

- Flatt M., Derici C. Dybvig R. K., Keep A. et. al. "Rebuilding racket on chez scheme (experience report)", ICFP'19
  - Derici C. et. al. "A closed-domain question answering framework using reliable resources to assist students" Natural Language Engineering'18
  - Derici C. et. al. "Question analysis for a closed domain question answering system", CICLING'15
  - Derici C. et. al. "Rule-based focus extraction in Turkish question answering systems", SIU'14
  - Başar R. E., Derici C., and Şenol Ç. "World With Web: A compiler from world applications to JavaScript". Technical Report, Scheme and Functional Programming Workshop'09
- 

## **Awards & Scholarships**

- Scholarship and award for a project on teaching natural languages to hearing impaired, 2014.
  - Full Scholarship for PhD, 2015-2020
  - Full Scholarship for MSc, 2012
  - Full Scholarship for BSc, 2005-2010
-
