CANER DERİCİ

ABD PhD Candidate, Computer Science, Programming Languages

@ cderici@iu.edu   ⦿ UT, USA   ⚲ cderici.github.io   ⌨ github.com/cderici   Extended version (CV): cderici.github.io/cv.html

SELECTED PROJECTS

Pycket: A tracing JIT compiler for self-hosting Racket[1]

- PhD project on **Programming Languages**. I am the main developer since 2016. I re-designed the compiler front-end to make Racket bootstrap on Pycket, i.e., achieved a full Racket implementation on RPython framework. Developed performance analysis/debugging tools, theoretical models, implemented various optimizations and large number of run-time primitives. Maintained and improved the run-time data structure implementations (hash tables, vectors, structs etc.).

Rax: A full-stack nanopass compiler from a small subset of Racket to x86_64 assembly [2]

- Started for school, turned into a growing fun project. Two-person collaboration. I built and tested all the passes (e.g., closure conversion, register allocation, code-gen, etc.).

FARS: Functional Automated Reasoning System[3]

- A resolution-refutation style automated theorem prover. I developed it for fun at first, then I turned it into a school project. Written all in Racket by myself.

HazirCevap (Witty): A closed domain question answering system for high school students

- MSc project on **Natural Language Processing**. I led the research and development, 3 faculty members and 4 grad students were involved. This was my MSc thesis work (see Publications). I developed a hybrid model for question analyzing (Hidden Markov Model along with a rule-based model), developed a reliability score for web-pages/documents, used the Indri search engine for processing and retrieval for answer generation, implemented both the front and back-end in Python.

Sessizliğe Oku (Read to Silence): An application to teach people with hearing disability how to read

- I was the main developer. 2 faculty members from Linguistics, 1 from CS, and 2 RAs were involved. We aimed to develop a stable framework, so Turkish grammar lectures and exercises could be easily accessible for Deaf people. Collaborated with the linguists to implement a web & mobile app specifically designed for Deaf people. Used JavaScript, HTML and PhoneGap.

EDUCATION

- **PhD** (Grad. 2021), CS, Indiana University, USA
- **PhD** CS, Boğaziçi University, Turkey (Dropped)
- **MSc** CS, Boğaziçi University, Turkey
- **BSc** CS, Istanbul Bilgi University, Turkey

TECH SKILLS

Skill	Level
Racket/Scheme/Lisp	●●●●●
Python	●●●●●
Java	●●●●○
JavaScript	●●●○○
C/C++	●●●○○
Haskell	●●●○○
SQL, Matlab, R, CSS	●●●○○
Linux	●●●●●
Git/Hg/Version Control	●●●●●
Maven/Jenkins/Auto Deploy	●●●●●
Travis/Continuous Integration	●●●●●
LaTeX	●●●●○
Emacs	●●●●○

EXPERIENCE

- **Course Instructor**, Indiana University, Spring 2021. Introduction to Computer Science (HtDP Style Functional Programming).

- **Teaching & Research Assistant**, Indiana University, 2015 – 2020. Taught Advanced Compilers, Domain Specific Language Design, etc.

- **Product Development Specialist**, Asseco SEE, 2013. Developed and tested virtual point-of-sale applications. Used Java, Tomcat, Spring, Mercurial, Jira.

- **Teaching Assistant**, Istanbul Bilgi University, 2010 – 2013. Taught Data Structures & Algorithms, Programming Language Principles, Database Systems.

- **Hackathonist'14**, Istanbul, 2014. Developed a Google Glass application (running on a mock glass API) that talks with the CitySDK for various smart city tasks (e.g., finding a suitable bus-route).

AWARDS & SCHOLARSHIPS

- Full Scholarship for BSc, 2005-2010
- Research Scholarship for MSc (fully funded for 2 years)
- Scholarship for a research project on teaching natural languages to hearing impaired, 2014.

SPOKEN LANGUAGES

Language	Level
Turkish (native)	●●●●●
English (living in US since 2015)	●●●●○
